

ZDK-501

CHEQUE DEPOSIT MACHINE

The bank branches we visit today have significantly evolved from what it used to be 40 years ago.

ZDK-501 is a touch screen based Deposit application embedded kiosk which enables its users to have instant access to deposit their cheque and get a confirmation deposit receipt.

ZDK-501 is the outcome of our firsthand experience with interactive application development blended with touch screen technology. Our innovative, functional and eye-catching designs will make you stand out from the crowd.

While this move toward self service banking proves to be one that provides customers unparalleled 24-hour banking convenience and flexibility, banks need to harness it with robust technology to ensure that customer experience is not compromised. It needs to ensure that customer service satisfaction being received via its self service channel matches service satisfaction received if a customer were to interact with a teller.

The silver look MDF enclosure which houses the hardware comes with PlusTech 400 Cheque Scanner & 80mm industrial thermal printer.

SPECIFICATIONS

INDUSTRIAL CPU

Processor (core i3)
RAM 2GB DDR3
Hard Disk – 500 GB

DISPLAY

Monitor: 17" LCD
Resistive 4/5 Wire
Touch Screen Panel
